## Video Editing Template rework — Photos showreel template (# 1)

This template originally is a Premiere Pro 4K footage that is very convenient to import user photos, videos, or other media files into it. However, the rendering time is too long because it uses After Effect as its cornerstone's technic, it costs above 10 minutes to render <=15 seconds of footage.

Thus, the rework process was done by me, the concept are migrated from After Effect, and the motion (animation) was reworked keyframe by keyframe. I also conceptualized this design to the simplest style, so I deleted some unwanted elements, such as annoying background text holder, un reusable background, and lighting effects that were not to add in this step.

This template was first used in the graduation ceremony photo showreel at my working primary school, and the result was satisfactory.

A copy of the design manual script is attached behind the cover page.
